Unlock
the Information You Need to Manage Your Plant Operations

More
Effectively from Over 70 Unique Reports

As the leader in automation change management solutions, MDT Software develops innovative products to solve your business challenges. The AutoSave Reports Module represents MDT's latest solution for managing your devices even more effectively.

Categories

Scheduled Items Report Menu

The AutoSave Reports Module further enhances the

reporting capability of AutoSave by allowing you to

generate over 70 unique reports from the historical

data stored in AutoSave's database.

The AutoSave Reports Module will allow you to:

Filter your data so you can access the

specific information you need. Search

historical data by date range, specific area,

program, client, agent, bridge, wire, device, family,

class, user, compare group and more.

Automatically receive reports when you

need them.

Reports
can be run on a specified

schedule
or manually as needed. Scheduled

reports also automatically
generate a PDF

version for audit
compliance.

Receive detailed information that

will help you identify
problem areas

and improve
processes.
Quickly
view

important
program statistics for an area or the

entire system.

Validate your quality
assurance

processes.
Create
audit reports that help

validate that quality control processes are in

place and are being
followed.

Identify areas within your system that are

at risk.
Reports reveal issues such as
scheduled

comparison
differences and programs that are not

in a scheduled comparison
group so they can be

resolved
quickly.

About
MDT Software

MDT
Software is the world leader in change management solutions for
automated manufacturing assets. Founded in 1987, MDT Software has
grown into a trusted provider of disaster recovery and change
management solutions for leading manufacturers.

As the inventors of Change Management software
for the Programmable Device Support (PDS) market, MDT is the only
leading vendor that does not produce a line of automation hardware.
We believe this independence is our strength, enabling us to address
our clients' change management needs objectively, without favoring
our own hardware products.
